BATCH 101

1.What information does this file record?

-This file records the Time, the Person, there ID, Date and Room for the nursery

2. What kind of device do you think produced this file, and what in the data makes you think so?

-A sensor or a badge scanner, because it keeps a record of who comes in and out

3. What identifies one record?

-Time

4. How are the fields represented?

- Data Fields

5. How many records are there?

-40

6. What do you notice about how the device actually collects and stores data?

-The device is monitoring for security reasons for the safety of the children, so it wants to keep a detailed database of who checks in the nursey

7. What are the advantages and disadvantages of this data format?

-An advantage of this data format is that it holds all of the data with time stamps and dates to back up the information

-The only disadvantage is the data is bunched together and some of it is unaligned a little

Feed 101

1.What information does this file record? It keeps a record of newborn patient's heart rate, breathing rate and temperature that are inside of a hospital

2. What kind of device do you think produced this file, and what in the data makes you think so?

-The hospitals database collects the data from an EKG monitor and a cardiorespitory monitor that takes those readings and then sends the data to the hospitals database tohave a paper trail of the patient's previous visit

3. What identifies one record?

-Date

4. How are the fields represented?

-Physical Field

5. How many records are there?

-1569 records

6. What do you notice about how the device actually collects and stores data?

-After the data is collected from the multi parameter it then begins to save it within the database then proceeds to read the data to verify it then it moves on to the next set of data

7. What are the advantages and disadvantages of this data format?

-The advantage of this data format is that it's better organized rather than the other one it's bracketed off from the other data so that it isn't confused

-There aren't any disadvanatges

Stream 101

1.What information does this file record?

-Its collecting data for every 30 mins that a door opens and closes within the nursery, while also collecting the readings of the temperature and which room exactly opens up

2. What kind of device do you think produced this file, and what in the data makes you think so?

-A camera, because the name of the file is stream 101

3. What identifies one record?

-Door Status

4. How are the fields represented?

- Data Field

5. How many records are there?

-217

6. What do you notice about how the device actually collects and stores data?

-It looks as if the data is being taken from a camera that is inside the nursery being that it saves when the door opens and when it closes.

7. What are the advantages and disadvantages of this data format?

-Avantages- It gives all of the basic information of the surroundings such as Room Number, Temperature, Door Status and Date/Time

Disadvantage- Doesn't let you know who came in and out of the nursery
